Antkote® 2042N

Hydroxyfunctional polyacrylic dispersion

Technical Data Sheet

Name: Antkote® 2042N
Revision Date: 2018-05-09

Product Description

Antkote® 2042N is a hydroxyfunctional polyacrylic dispersion designed for steel, machinery and anticorrosion topcoats. In combination with polyisocyanates or other crosslinkers, it can be used for waterborne two-component coating. It also can be used for one component baking coating with amino resins or blocked polyisocyanates. Approx. 44% in water/1-butoxy-2-propanol, approx. 46.5:7. Neutralizing agent, N,N-dimethyl ethanolamine(<2.5wt%), bound as a salt.

Properties

1. High gloss and high building up.
2. Good compatibility with polyisocyanates.
3. Blistering-free in high build coating.
4. Excellent weather resistance.

Storage

The product should be stored in dry conditions above 5°C and below 35°C with the integrity of the packaging, and prevent direct sunlight. The validity of this product is for 6 months, performance assessment is recommended before use after shelf life. The product should be protected from freezing during storage. It is suggested to filter before application and use up once the package is open.
Antkote® 2042N

The viscosity of the product is largely governed by the pH. As the pH may decrease during storage, a decrease in viscosity is also to be expected. The viscosity can be adjusted to its original value by the addition of small amounts of an aqueous 10% solution of N,N-dimethyl ethanolamine.

Disclaimer: Wanhua Chemical Group Co., LTD. recommends that any customers of this material should check with Materials Safety Data Sheet (MSDS) for details about safely handling this material. We also suggest that you contact the suppliers of any other materials used in our recommended formulations and suggestions for appropriate health and safety regulations prior to use.
